# Carelon Real World Data

Unlock the data that has powered two decades of impactful research

At Carelon Research, the research arm of Elevance Health, we've built a comprehensive real-world database that has driven more than 3,000 healthcare research publications. Designed to tackle complex healthcare challenges, our data empowers clients to explore new actionable insights. Be one of the first to gain access to this de-identified data to support your analysis plans.

Analysis-ready, integrated real-world data

Carelon Real World Data draws from the Healthcare Integrated Research Database (HIRD), the proprietary database of Commercial and Medicare populations built by Carelon Research.

Closed medical and pharmacy claims

Linked electronic health records (EHR)

Enrollment records

Standardized cost data

Carelon Real World Data

Enhanced oncology data

Laboratory results

Race and ethnicity data

Social determinants of health data

50M de-identified individuals (2015–2024)

carelonresearch.com

carelon

Analysis-ready datasets and research support

Depth and breadth

National representation of Commercial and Medicare healthcare claims linked to enrollment and EHR records as well as clinical oncology, laboratory results, and SDOH data

Quality

Integrated, analysis-ready, de-identified dataset — complete with patient, provider, and payer information — with industry-leading data quality refined through two decades of research and direct connectivity to the data source

Expertise

24-hour technical and scientific support by a multidisciplinary team of researchers to help clients understand our data as well as we do, rooted in our own research heritage and portfolio of over 3,000 publications

Explore more complete, granular insights

Carelon Real World Data can be linked to available supplemental data for specific needs, such as date of death, race and ethnicity, or provider identification (NPI), added to two core datasets:

Pan-therapeutic data	Oncology data
Closed claims integrated with EHR data, for insights about patients and treatments across therapeutic areas	Closed claims integrated with EHR data and clinical oncology data, for insights about oncology data and treatments
